SECOND DESK

INTERNATIONAL ADVISORY

Automation & utility packages

Reliable plant integration and controlled utility distribution

INDUSTRIAL EQUIPMENT & MACHINERY

AI-generated illustration | not an actual project reference

Product scope and commercial role

TECHNICAL SCOPE

- Control panels
- Electrical and automation packages
- Compressed air, water and utility skids

SECOND DESK ROLE

Technical-commercial qualification, market development and manufacturer or partner coordination.

Source: Second Desk website | sector image, not project evidence

Design basis and operating envelope

INPUTS REQUIRED BEFORE A COMPARABLE QUOTATION

- I/O list
- Power supply and loads
- Communication protocol
- Environment class
- Operating sequence

The owner and qualified manufacturer confirm operating conditions and applicable design basis before engineering release.

Engineering and component selection

DESIGN REVIEW POINTS

- Functional design specification
- PLC architecture
- Interlocks
- Panel heat
- EMC and maintainability

Selection trade-off

Check load schedule, protection, network protocol and loss-of-signal behavior. Define boundary between package controls and owner systems.

Project drawings, tolerances and design details remain subject to the responsible supplier or engineer.

Representative technical section

AI-generated technical concept | not to scale or for fabrication

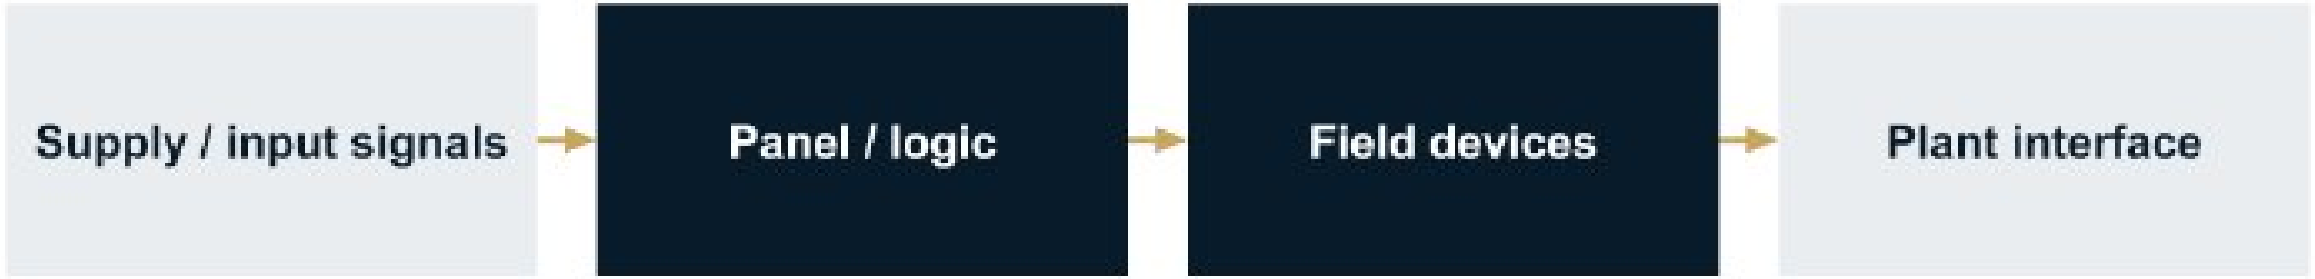
DETAILS TO CONFIRM WITH QUALIFIED SUPPLIER

- Functional design specification
- PLC architecture
- Interlocks
- Panel heat

Confirm the actual construction and dimensions from controlled supplier drawings or approved samples.

Representative functional arrangement

Conceptual sequence for technical discussion. Actual layout and interfaces depend on the approved specification.



Input boundary

I/O list / Power supply and loads

Operating and output boundary

Sequence tests / Alarms and historian records

Fabrication and assembly sequence

AI-generated manufacturing scene, illustrative only

TYPICAL CONTROLLED WORKFLOW

01 Panel assembly

02 Busbar and wiring

03 Instrument installation

04 Software configuration

05 Documentation

Inspection and quality control

TYPICAL QUALITY CONTROL POINTS

01 Point-to-point checks

02 Insulation tests as applicable

03 I/O simulation

04 Safe-state verification

AI-generated sector inspection scene; illustrative only

Inspection methods, sampling, hold points and sign-off depend on the order and approved quality plan.

Factory acceptance and site acceptance

FAT / manufacturing release

- Point-to-point checks
- Insulation tests as applicable
- I/O simulation
- Safe-state verification

SAT / performance verification

- Sequence tests
- Alarms and historian records
- Utility capacity and fail-safe behavior

Agree test conditions, tolerances, witness authority and punch-list closeout before testing. SAT is distinct from factory release.

Site integration and commissioning readiness

AI-generated application scene; illustrative only

SITE PREREQUISITES

01 Verify supply, earthing and network interface

02 Field loop checks

03 Authorized energisation

Packing, logistics and delivery

PRODUCT-SPECIFIC PACKING CHECKS

01 Secure panel internals

02 Humidity protection

03 Cable schedules and software backup

Define the Incoterms® rule, named place, export documents, insurance responsibilities and site receipt process in the commercial agreement.

AI-generated logistics scene; illustrative only

Technical and commercial risk review

Require a functional design specification and verified I/O matrix; version control backups and as-built documentation.

Design compliance

Compare the same data sheets, duty and explicitly agreed exclusions.

Technical evidence

Request relevant engineering documents, inspection plan and test records.

Execution risk

Check site access, spares, service scope and the manufacturer's support plan.

Responsibilities across the supply chain

OWNER / EPC	SECOND DESK	MANUFACTURER / CONTRACTOR
Defines duty, project constraints, site interfaces and acceptance authority.	Clarifies the opportunity, identifies suitable suppliers and coordinates technical-commercial communication.	Owns engineering, production, testing, guarantees, site execution and contractual obligations as agreed.

Supplier names, manufacturing capability, certificates, references and country-specific approvals are verified for each enquiry; no standing partner or factory is implied.

RFQ and evidence package

01	**Technical definition**	Duty and design basis, data sheets, scope boundaries and tie-in information.
02	**Supplier evidence**	Capability, drawings, applicable compliance, inspection plan and relevant references.
03	**Commercial offer**	Scope and exclusions, lead time, payment, Incoterms® rule, optional services.
04	**Handover plan**	FAT/SAT where applicable, documentation, spares, training and after-sales.
